Three Stages.
One Plan to Win Week One.

Simplifying the breakout work into how we sell it, how we deliver it, and how we service the customer from sale through September. A working presentation for today's session — not a status report.

WORKING SESSION

Decisions, owners, and the few priorities that matter now

FRAMING

Why we are simplifying the work today

The six-theme breakout was a useful prioritization lens. It is too busy as an operating structure. We collapse it into three stages so each team leaves with one or two priorities — not a list.

STAGE 1 · SELL & MARKET

How we generate demand, set expectations, and protect the narrative.

STAGE 2 · DELIVER

How orders, hardware, BYOD, integrators, and product readiness clear at scale.

STAGE 3 · SERVICE THROUGH SEPTEMBER

How CX, streaming readiness, and support hold from sale through preseason and Week 1.

Positioning constraint preserved: EverPass remains complementary to existing venue infrastructure across marketing, install, fulfillment, and partner motion.

STAGE 1

Demand · Expectations · Narrative

How we sell it & market it

Goal: Drive scalable SMB demand with consistent expectations and a narrative we can defend — without outpacing operational throughput.

MARKETING / GTM

Define a segmented offer ladder by tier and stand up a measurable awareness lift for SMBs that don't yet know EverPass carries Sunday Ticket.

Decide today: which segments, which channels, which lift metric.

SALES

Align sales pace with delivered operational throughput; install a written gate for large-deal and partner exceptions.

Decide today: who signs the written exception, and what makes one warranted.

CX / SUPPORT

Standardize expectation-setting language across owned, DirecTV, Charter, and integrator touchpoints so the brand promise lands the same way everywhere.

Decide today: single owner of the expectation script across channels.

EXEC / PMO

Lock one canonical hardware narrative and run a weekly top-3 cadence so priorities stop shifting mid-week.

Decide today: who owns the canonical narrative; what gets cut to keep the top-3 honest.

How we deliver it

Goal: Make the buy-to-fulfill path scale before preseason. Sequence product, hardware, and partner work so activation demand in the 6–8 weeks before Week 1 doesn't break the system.

OPS / FULFILLMENT

Stress-test order-to-fulfillment at the planned scale range before July; stand up an ops dashboard by stage, owner, and next action with exception reporting and SLAs.

Decide today: the test scenarios, the SLA targets, and the single source of truth for status.

PRODUCT / ENGINEERING

Publish pre-Week-1 feature sequencing; ship sync, login, and navigation reliability fixes before preseason demos.

Decide today: what is in the pre-Week-1 cut, and what is parked without re-litigation.

PARTNERSHIPS / INTEGRATOR

Name a dedicated partner owner; build an integrator-centric fulfillment plan with capacity visibility and incentives that match real workflows.

Decide today: the partner owner, and the regions where integrator capacity is the binding constraint.

FINANCE / REVOPS

Lock shared definitions of *sold*, *activated*, and *live*; tie unified reporting to revenue so every team reads from the same numbers.

Decide today: the three definitions, in writing, with one approver.

STAGE 3

How we service the customer from sale through September

Goal: Hold the customer experience across every seam — order, install, onboarding, support — and treat streaming readiness as its own gate. Week-one technical issues are the most likely PR spiral.

CX / SUPPORT

Assign one end-to-end CX owner across order → install → onboarding → support; stand up a support → product → marketing feedback loop with a follow-the-sun support posture.

Decide today: the named owner team, and the cadence the feedback loop runs at.

PRODUCT / ENGINEERING

Treat streaming readiness as a separate gate from the broader product roadmap; define week-one issue triage and on-call ownership before preseason demos.

Decide today: what counts as ready-to-stream, separate from ready-overall.

OPS / FULFILLMENT

Close the seam between order and onboarding with exception reporting and SLAs the support team can actually act on.

Decide today: which exceptions auto-page support vs. wait for the daily review.

MARKETING / GTM

Build a communications-readiness response playbook covering external narrative attacks and partner-channel issues, ready to deploy before preseason.

Decide today: who approves a public response, and within what window.

DECISION LOGIC THE TEAM NEEDS TO CLOSE TODAY

For each artery, define the four boxes — don't guess them.

We are not setting numbers in this deck. The session's job is to fill in the metric, the threshold, the owner, and the fallback for each artery. If a row doesn't have all four, it isn't ready.

ARTERY	METRIC	THRESHOLD & OWNER	FALLBACK PATH
CX continuity Streaming readiness Fulfillment throughput	What we will measure that proves the artery is healthy. Team to define.	The level at which we act, and the single name accountable for the call. Team to define.	What we do when the threshold is missed. Pre-agreed, written, not improvised. Team to define.

No invented numbers in this deck. The deliverable from today is a filled-in version of these four columns for each artery.

WHAT MUST WIN NOW

Arteries vs. paper cuts

ARTERIES **Failure here = overall failure**

CX continuity across order, install, onboarding, and support — one owner, no seams.

Streaming readiness as its own gate, distinct from the full product roadmap.

Fulfillment throughput proven by stress test before July, with SLAs and exception reporting.

PAPER CUTS **Real, but cannot displace arteries**

Device-flow complexity and demo-kit edge cases.

Dashboard polish beyond the minimum operating view.

Long-tail product gaps not on the pre-Week-1 cut.

BYOD edge paths beyond the agreed maturity gates.

Rule of the room: a paper cut never displaces an artery. If it tries to, escalate via the written exception gate, not in standing meetings.

DECISIONS ON THE TABLE NOW

Cross-stage decisions to close today

One CX owner. Name the team accountable end-to-end across order → install → onboarding → support. No co-owners.

Streaming-ready definition. Agree what counts as ready-to-stream, separate from ready-overall, and who signs it off.

Pre-Week-1 product cut. Confirm the feature list that ships before preseason demos. Everything else is parked, in writing.

Written exception gate. Decide who approves large-deal or partner exceptions and what makes one warranted — replace standing-meeting negotiation with a written record.

Shared revenue definitions. Lock *sold*, *activated*, and *live* so reporting reconciles across Sales, Ops, and Finance.

Response playbook owner. Name the team that owns the external narrative response plan and partner-response kit before preseason.

CLOSE THE LOOP

What we decide. What we park. What teams owe by next session.

DECIDED TODAY

- Three-stage operating model replaces the six-theme view as the working structure.
- Each team carries one or two priorities per stage — no exceptions.
- Arteries are non-negotiable; paper cuts cannot displace them.
- Decisions are written, async-first; standing meetings ratify, they do not negotiate.

PARKED, IN WRITING

- Anything outside the pre-Week-1 product cut.
- BYOD paths beyond the agreed maturity gates.
- Dashboard polish beyond the minimum operating view.
- Channel and integrator expansion beyond the named regions.

Each team owes by next session: filled-in metric / threshold / owner / fallback for its artery, and confirmation of its 1–2 stage priorities.
